

Gemeente Amsterdam

Walkability in Amsterdam

More space for the mother of all modes of transport

Eric de Kievit | Senior Advisor Transport & Traffic Research | Mobility & Public Space

Johan Olsthoorn | Researcher | Mobility & Public Space

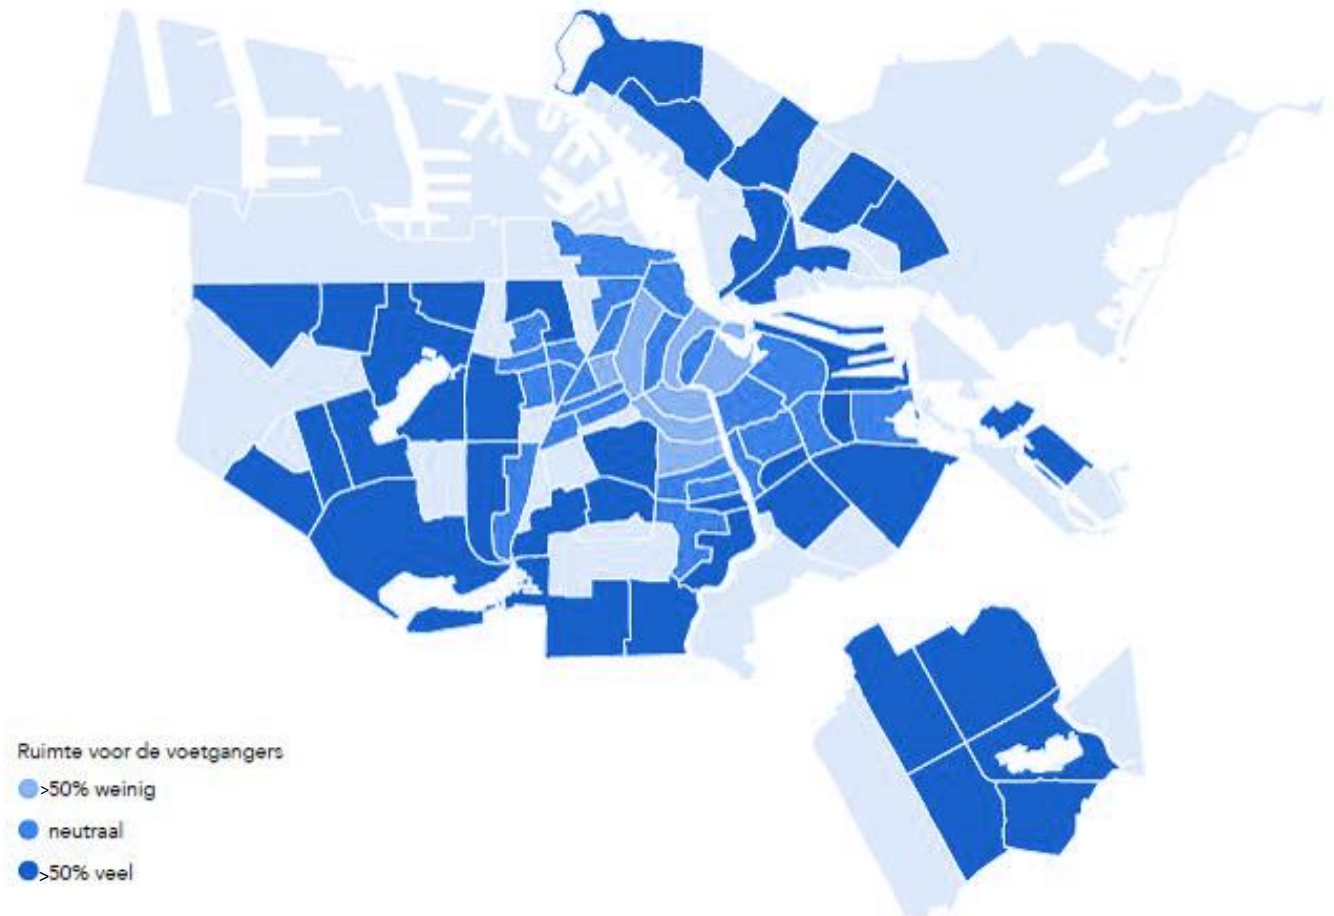

Manchester, Thursday November 22th, 2018

❌ Residents find there is too little space for ❌ pedestrians in city centre ❌

Survey on pedestrians and public space, 2016

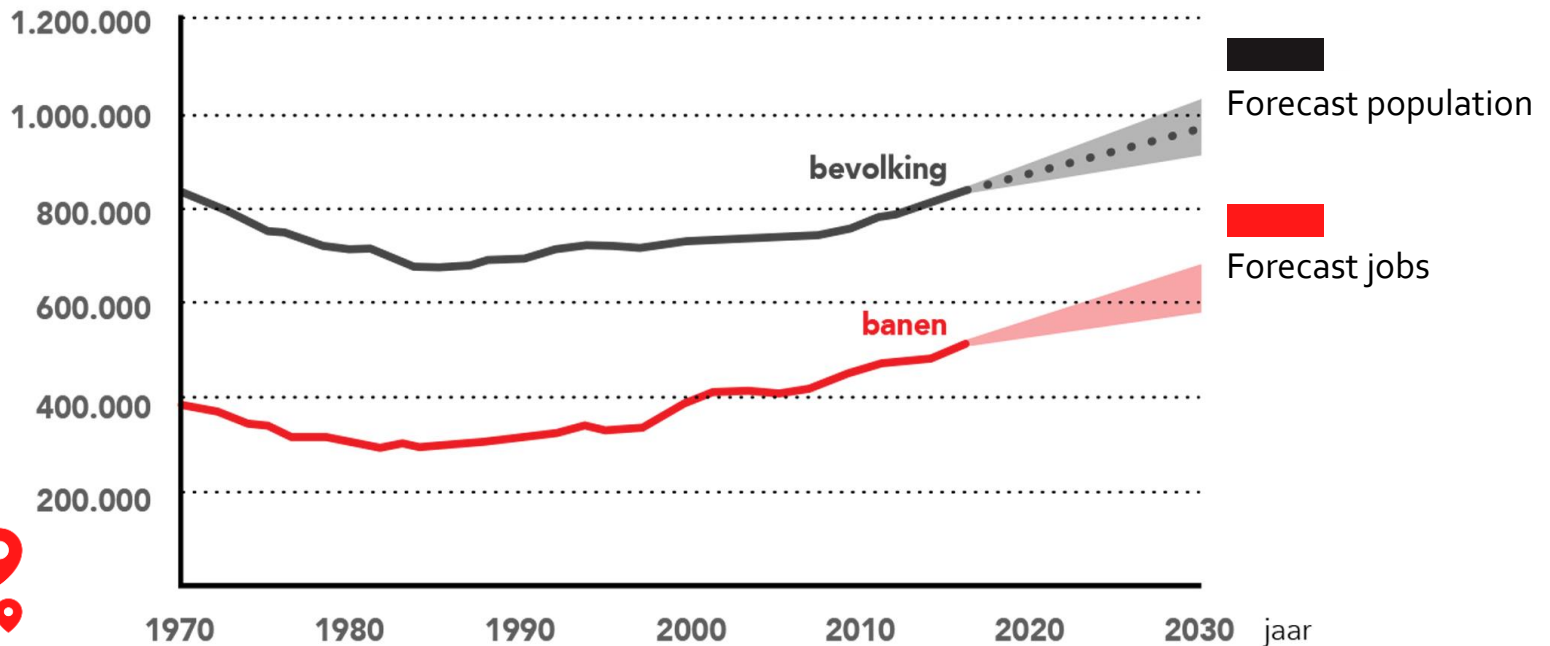

A rapidly changing city

✘ Amsterdam's population increasing ✘ towards 1 million inhabitants in 2030 ✘

Development and forecast population and employment, Amsterdam 2016
(source: OIS, PBL/CBS)

Population

✘✘✘ Tourism: The number of hotel stays continues to increase

Number of hotel overnights (x1.000), 2008-2015

Number of tourists per 1000 inhabitants

Above this growth in hotel bookings also
736.000 Airbnb-overnights (2015)

✘ Crowds, narrow sidewalks and obstacles
✘ result in poor walkability
✘

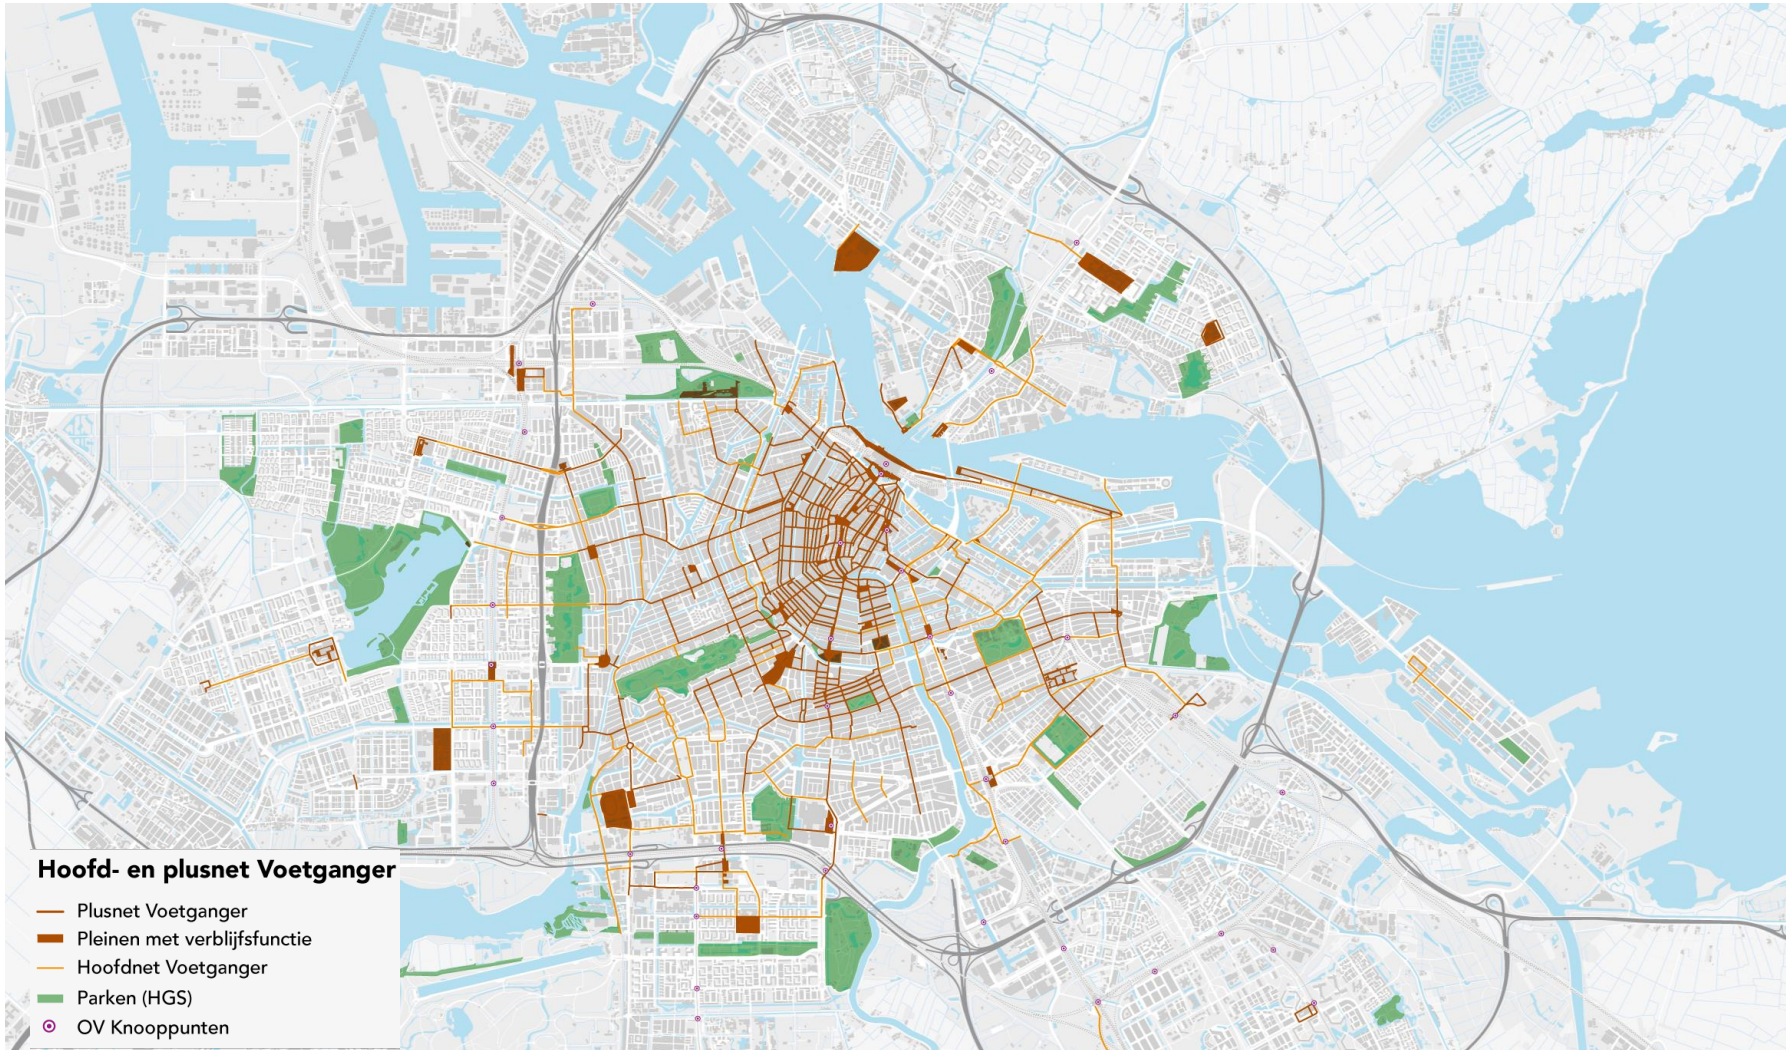

✘ Pedestrians forced to dodge obstacles or
✘ to walk on road
✘

❌ Pedestrian policy started off with
❌ defining a main pedestrian network
❌

Little known about state and use of main pedestrian network

How can we analyse and map out the state and use of the main pedestrian network, using existing data?

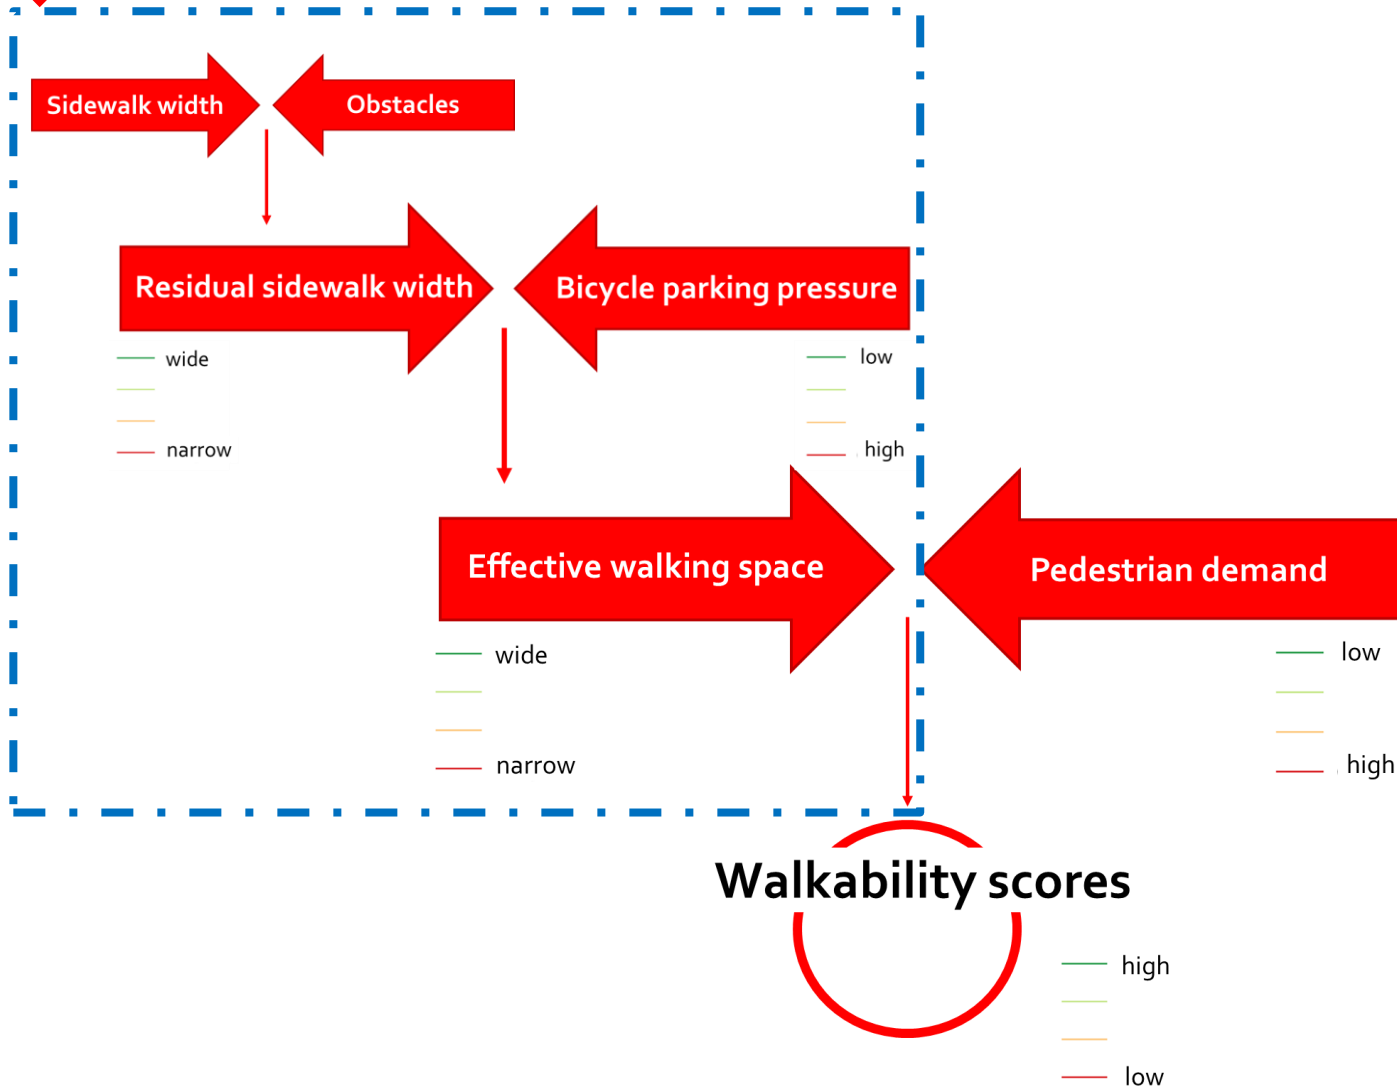

Walkability:

Effective walking space and Pedestrian demand

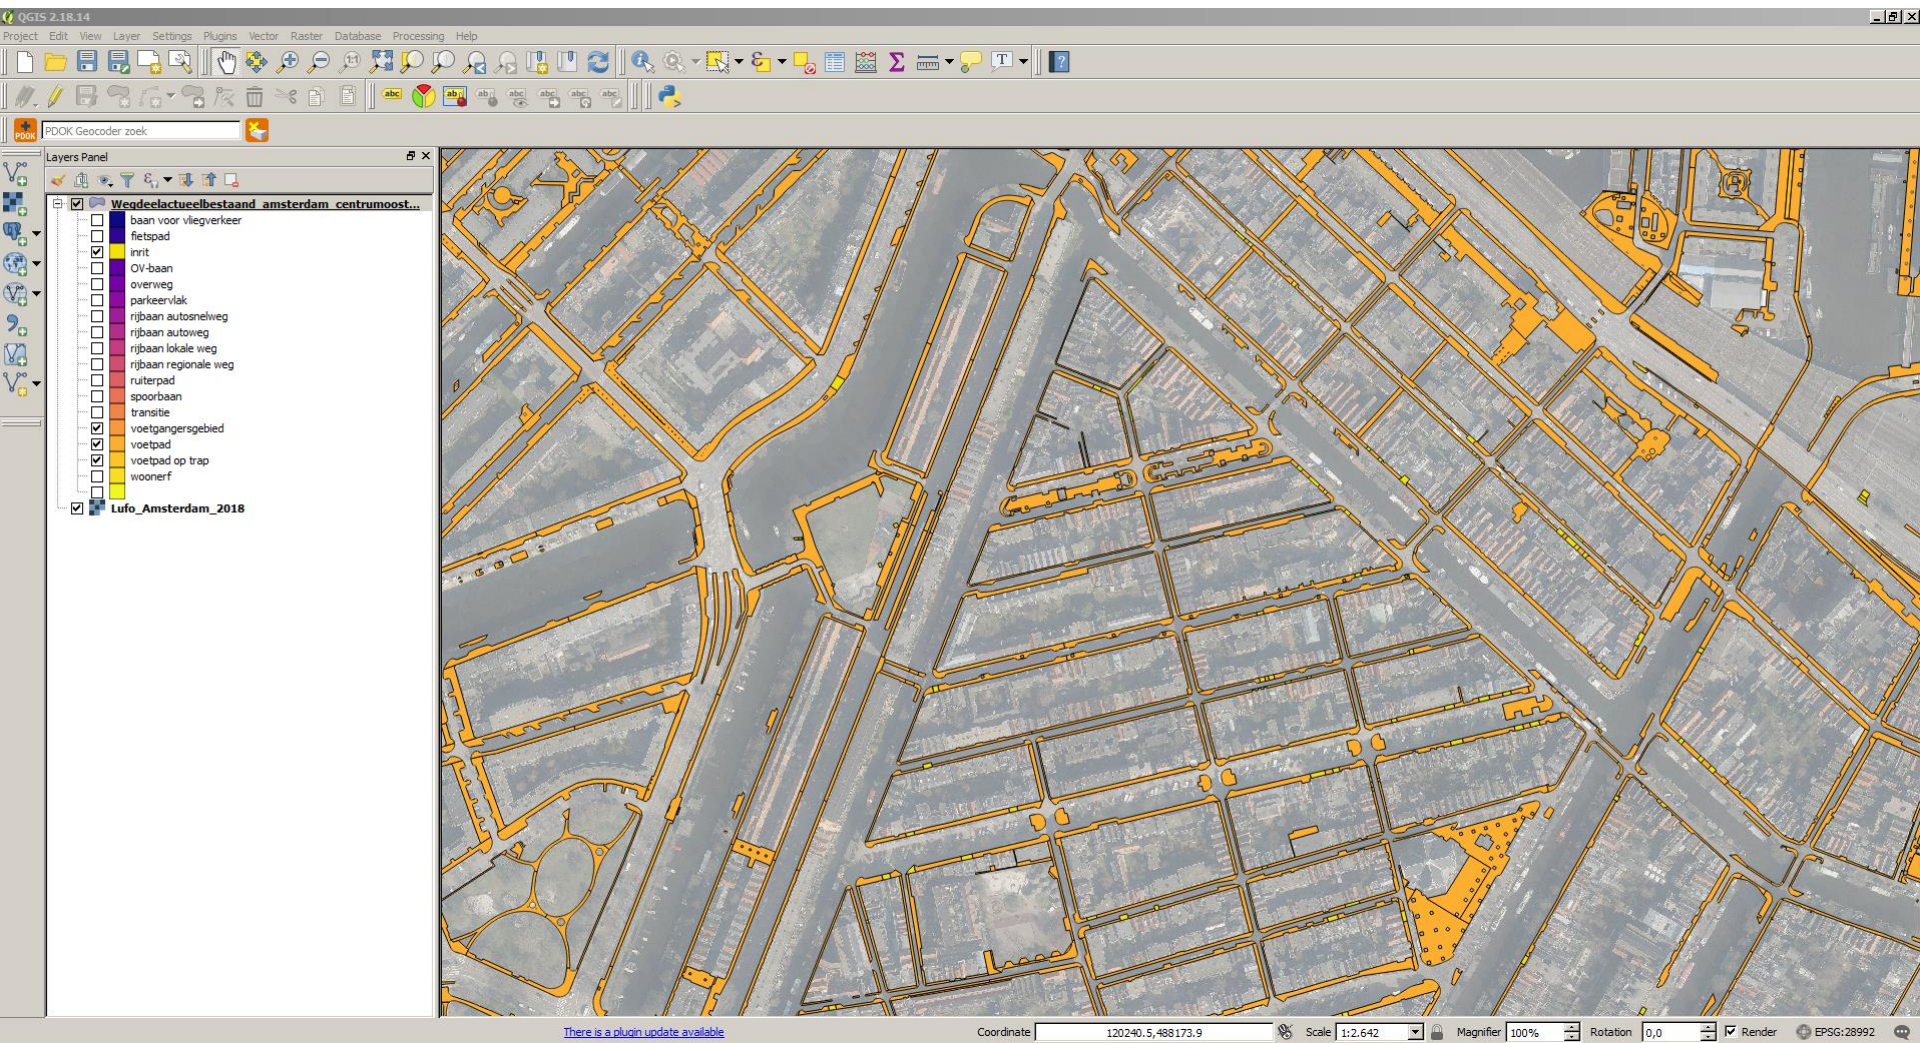

Effective walking space: Sidewalk width, obstacles and bicycle parking pressure

❌ Pedestrian space in national registry for
❌ large scale topography
❌

❌ Pedestrian space ❌ (obstacles at Café Winkel) ❌

Walkability: Effective walking space and Pedestrian demand

Clear visual of Walkability

Utrechtsestraat
Effective walking space = **very narrow**
Pedestrian demand = **very high**
Walkability = **poor**

Roetersstraat
Effective walking space = **wide**
Pedestrian demand = **high**
Walkability = **moderate**

Legenda
Walkability-score
— uitstekend
— goed
— matig
— zwak

Ceintuurbaan
Effective walking space = **wide**
Pedestrian demand = **very high**
Walkability = **moderate**

Wibautstraat
Effective walking space = **very wide**
Pedestrian demand = **very high**
Walkability = **good**

❌ Results applied to give more public space
❌ to pedestrians
❌

Round-Up Walkability analysis

- Accurate:
 - supply and demand of effective walking space
 - Combining many detailed datasets
- Clear visualisation:
 - summary of results per sidewalk
- Useful:
 - Results applied to policy making to give more public space to the mother of all nodes: walking!!
